Aastha Sharma

Backend Engineer: Golang · Distributed Systems · APIs · Embedded/IoT · Open to Remote & Relocation

Bengaluru, India | saastha.2911@gmail.com | +91 7296836197 | linkedin.com/in/aastha-sharma-906a2720a | github.com/saastha09 | Portfolio

SUMMARY

Backend engineer with 2.5 years of experience building production Golang services across REST, gRPC, and GraphQL, with working knowledge of Python (FastAPI) and Node.js. Sole backend owner on a 6-person team: service architecture, real-time device communication, AWS infrastructure, and CI delivery for a live production system spanning 100+ networked devices. Also brings hands-on embedded Linux/firmware experience (Yocto, OTA).

SKILLS

Languages & Frameworks: Golang (primary), Python (FastAPI), Node.js/Express, JavaScript, SQL
APIs & Architecture: REST, gRPC, GraphQL, Microservices, Event-driven systems, SIP
Data & Caching: PostgreSQL, MySQL, MongoDB, Redis
Cloud & Infra: AWS (EC2, S3), Terraform, Docker, NGINX, Linux, Git, CI/CD (GitHub Actions)
Embedded / IoT: Yocto/BitBake, Mender OTA, embedded Linux firmware, STM32
Auth & Security: Casbin RBAC, Google OAuth

EXPERIENCE

Software Engineer, Golang — In Time Tec, Bangalore Jul 2025 – Present

- Sole backend and infrastructure engineer on a 6-person team — the only engineer with end-to-end context across service architecture, cloud infra, CI, and embedded deployment; own architecture decisions independently.
- Built Golang backend services handling real-time heartbeat and config sync across a 100+ device production fleet (validated in a 5-device local test environment), SIP call workflows (full INVITE lifecycle), and emergency event routing across 4 partner integrations (Singlewire, Rauland, Raptor, Bogen).
- Engineered a multicast audio pipeline with priority-based preemption and jitter-buffer tuning, cutting audible latency and drift on campus-wide announcement delivery across the device fleet.
- Customized embedded Linux firmware via Yocto/BitBake; managed Mender OTA rollout and DHCP/device-identifier configuration across 100+ production hardware deployments.
- Deployed and managed services on AWS (EC2, S3); set up and maintained CI/CD pipelines with GitHub Actions for build, test, and deployment automation.
- Authored Terraform scripts to provision and manage AWS server infrastructure for CWC, enabling repeatable infrastructure deployment.

Junior Software Developer — Cyber Infrastructure, Indore Apr 2024 – May 2025

- Designed and shipped REST, gRPC, and GraphQL APIs across a 4-service microservices architecture (Golang + Node.js) as part of a 10-person cross-functional team through full project lifecycle.
- Implemented Redis caching on high-traffic endpoints, meaningfully cutting p95 query latency and reducing database load.
- Built RBAC authorization with Casbin and Google OAuth integration; delivered real-time notification workflows end to end.

PROJECTS

Lightspeed (In Time Tec) — Golang, SIP, Multicast, Yocto, AWS, NGINX, PostgreSQL

- Distributed school-announcement and device-orchestration platform managing 100+ embedded C25 units; built multicast audio pipeline with priority-based preemption and file-based buffering. Also built device-management web app (LDAP auth, factory reset, dual-IP conflict prevention) and a district-level control app for multi-school visibility.

Younified (Cyber Infrastructure) — Golang, gRPC, GraphQL, Redis

- Distributed backend across 4 microservices (User, Union, Communication) with Redis-backed caching and real-time notification delivery.

Wansafar (Independent) — Golang, REST, Casbin, Google OAuth

- Safari-booking platform built from scratch: REST APIs for bookings and resource management, Google OAuth authentication, Casbin-based RBAC.

EDUCATION

B.Tech, Information Technology — Acropolis Institute of Technology and Research, Indore 2024
CGPA: 8.46
